

Carriage Rollers

Carriage Rollers - Carriage rollers are specifically designed bearings which are utilized on lift masts to be able to help them work in difficult environmental conditions. Lift masts are frequently subjected to shocks, oscillations, vibrations and high dynamic and static loads. This apparatus is regularly exposed to environmental influences like for example dust, cold, heat, aggressive ambient air, moisture and contamination. Hence, the guidance arrangements of lift masts should be specifically robust and have a particular high load carrying capacity.

So as to help compete in many different environmental surroundings, carriage rollers were designed for several lift masts. While having the ability to deal with a specifically high load carrying capacity, these bearings provided a cost-effective operational security for the guidance arrangement of the lift masts.
